Lance Keay

Senior full-stack developer and DevOps engineer

Sample CV: the layout is final; the experience entries are sample text until Lance supplies his own.

Profile

I build web applications end to end and run the infrastructure under them: pipelines, containers, servers and monitoring. I take contract work where one person can own a system from the database to the deploy. I also test AI tools, agents and self-hosted software on my own hardware and write up what I find at lancekeay.com.

Skills

- Application code: TypeScript, JavaScript, Python, SQL; REST and GraphQL APIs; React front ends
- Infrastructure: Linux, Docker, Kubernetes, Terraform, Ansible; cloud and on-premises hosts
- Delivery: CI/CD pipelines, release automation, blue-green and canary deploys
- Running it: Prometheus, Grafana, log pipelines, backups and restore drills, on-call runbooks
- AI tooling: local model serving, coding agents in real repositories, LLM API cost tracking

Experience summary (sample entries)

- Contract full-stack engineer: product features from schema to UI for small client teams, with the deploy pipeline handed over documented.
- Contract DevOps engineer: moved services from hand-built servers to containers with infrastructure as code, and set up monitoring with written alerts.
- Self-hosted AI work: set up model serving and chat front ends on client hardware, with usage and cost reporting.
