Lance Keay

Senior full-stack developer and DevOps engineer

lancekeay.com

> Sample CV content written for the website design. Lance replaces it with his own.

Profile

I build web apps and the pipelines, containers and servers they run on, and I work on contract with teams that need that done well and written down.

Outside client work I run a homelab, test AI tools and self-hosted software on it, and publish what I find on lancekeay.com.

Skills

Languages and frameworks	TypeScript and JavaScript, Node.js, React and Next.js, Python, Go, SQL and PostgreSQL
Infrastructure	Linux servers, Docker and Compose, Kubernetes, Terraform, Ansible, Proxmox
Delivery and operations	GitHub Actions and GitLab CI, release and rollback plans, Prometheus and Grafana, logging and alerting, restore-tested backups, written runbooks
AI tooling	Self-hosted models (Ollama, vLLM), coding agents in a team's workflow, model choice by cost and retries, retrieval over company documents

Experience summary

Independent

Contract engineer

Full-stack builds and DevOps work for product teams, from a single feature to a quarter-long platform move.

Product teams

Senior full-stack developer

Web apps from database to front end: APIs, background jobs, admin screens and the tests that let a team ship.

Platform work

DevOps engineer

CI pipelines, container platforms and infrastructure as code; monitoring that says when things break.

lancekeay.com

Writer and reviewer

Hands-on reviews of AI tools, agents and self-hosted software, and a monthly AI token market post.
