Lance Keay

Senior full-stack developer and DevOps engineer

hello@lancekeay.com | lancekeay.com

SAMPLE CV - placeholder experience, to be replaced with Lance Keay's real history.

PROFILE

I work across the whole stack: TypeScript and Python services, the databases under them, and the CI/CD, containers and cloud they run on. Most contracts start with 'the app works, but shipping it is slow and scary' and end with a pipeline the team trusts. Lately that includes putting model gateways, coding assistants and agents into a team's workflow with budgets, logs and an off switch.

SKILLS

Application: TypeScript, Node.js, Python, React, Next.js, Django, FastAPI, REST and GraphQL APIs.

Data: PostgreSQL, Redis, SQLite, message queues, schema migrations.

Delivery and ops: Docker, CI/CD pipelines, Linux, Kubernetes, Terraform, Ansible, Prometheus and Grafana.

AI tooling: model gateways, coding assistants, agent frameworks, self-hosted LLMs, cost tracking.

EXPERIENCE (SAMPLE ENTRIES)

2022 - now Independent contractor, full-stack and DevOps

Feature work paired with the delivery path: reviewed pipelines, containerised services, monitoring that pages the right person.

2018 - 2022 Senior engineer, product team

Owned a customer-facing web app and its API end to end, plus the build and release tooling.

2013 - 2018 Developer, then platform engineer

Started on the application, moved to the servers under it.

HOW I WORK

Written down: decisions and runbooks live in the repo. Small and reversible: changes ship in pieces that can be rolled back. Plain about trade-offs: if a tool is the wrong fit, I say so early.
