Lance Keay

Senior full-stack developer and DevOps engineer | hello@lancekeay.com | lancekeay.com

Sample CV produced for the website design build. Roles below are an outline; client names and dates to be confirmed.

Profile

I work on the whole path from a pull request to a running service: application code, the pipeline that ships it, and the infrastructure it lands on. As a contractor I ship product work across the stack, sort out build and deployment, and move services onto infrastructure a team can run.

Skills

Application: TypeScript, Node.js, React, Python, PostgreSQL, Redis, REST and event-driven APIs.
Platform: Docker, Kubernetes, Terraform, Ansible, AWS, Linux, reverse proxies, TLS, SSO.
Delivery: GitHub Actions, GitLab CI, Prometheus, Grafana, alerting, incident review, runbooks.
AI tooling: Ollama and self-hosted models, LLM APIs in production, retrieval over internal documents, coding agents.

Experience

Contract platform engineer, software company (recent)
Moved services from hand-managed servers to containers with infrastructure as code; rebuilt the release pipeline so any engineer could deploy.

Contract full-stack developer, product team
Built customer-facing features across React, Node.js and PostgreSQL; added monitoring that caught problems before customers did.

Developer to senior developer, permanent roles (earlier)
Web application development, then a growing share of build, deployment and operations work.
